# JOHNSTON CONSTRUCTION

Johnston Construction is an industrial / civil contractor specializing in bridge maintenance, construction and foundations. We have been operating in Western Canada for the past 30 years and are committed to providing exceptional quality work and maintaining positive client relationships. Our workforce combines skilled and experienced project managers, supervisors, operators, tradesmen and labourers into a team able to complete projects to exacting standards.

## **OUR MISSION:**

Our vision is to deliver high quality construction services, in a safe and proficient manner, exceeding our client's expectations.

## **OUR SERVICES:**

The scope of projects undertaken by Johnston Construction has varied from small bridge repairs to multi-million dollar contracts with parallel degrees of complexity. Johnston Construction's core business activities include:

- New Bridge Construction and Bridge Replacement
- Bridge Maintenance
- Pile Driving
- Rental Bridges
- Industrial Site Work
- Resource Roads

# BRIDGE AND MAT RENTALS

## RIG MAT RENTALS

Rig Mats are ideal for use as a portable platform to support equipment used in construction, a foundation for drilling rigs, helipads or camps, to bridge over soft spots on the road or separate equipment from the ground in environmentally sensitive areas.

With a large inventory of mats available Johnston Construction will be able to supply the mats needed to meet the requirements of your project.

Standard mats come in 20' and 40' lengths, though other lengths can be supplied upon request, are 8' wide and 6" thick. Our mats are built to last with 6" steel rails tightly packed with 6" thick timbers, end notched to create flat working surfaces.

## BRIDGE RENTALS

Johnston Construction maintains a line of rental bridges for use on temporary crossings and accesses. With an inventory of structures ranging from 7.6m (25ft) to 27m (90ft), Johnston Construction can supply its clients with light duty, standard L100 or CL625 structures or a custom built structure for all temporary access needs. Most structures have a common deck width of 14ft and are designed, fabricated, maintained and certified to the most recent government and industry standards. The structures come in various configurations, from complete units ready for a quick install, to units with the decking removed for specific applications. The bridges have been designed to minimize transportation costs and for ease of installation and are available with supporting equipment such as concrete sills and treated timber ballast walls.

All bridges and mats are available for rent or purchase. We can also provide an attractive lease to own option for those clients who are unsure of whether they want to rent or purchase, as well as many other options that can be discussed on a case by case basis.

At Johnston Construction we strive to provide the best service possible. Our rental fleets are maintained to ensure that we have what our customers need to do the job without delays. If we do not have something that is needed we will design and build it. Our experienced mat and bridge installation crews work within timelines and within budgets.
